

As a **Microsoft Tier-1 Cloud Solutions Provider**, Paragon Micro is able to provide a range of flexible licensing options, consultative services and support options to assist organizations in understanding the best way to purchase and deploy essential Microsoft software and cloud services.

While most environments contain a mixture of both on-premises and cloud, our experts help you choose from a license model that protects your investment and prevents re-architecture challenges down the line.

SIMPLICITY & CLARITY

We help you cut through the confusing options available in “on-premises hybrid use benefits,” number of times that software can be installed; as well as the many options available in cloud services deployments through SaaS, IaaS and PaaS. Having an understanding of deployment architectures and cost models up front can help prevent lock-in and inflexibility.

FLEXIBLE LICENSING

The flexibility of Paragon’s CSP platform allows you to amend your license requirements as often as you like in line with your ever-changing business demands, whether that’s on a daily, weekly, or monthly basis. In addition, there’s no need for a true-up, all license counts are accurate in real time.

MANAGED BILLING

By choosing Paragon’s CSP platform, your organization will benefit from monthly billing in arrears, in contrast to in advance, which provides greater visibility and management of cash flow and reduces the likelihood of incorrect billing.

SUPPORT

Paragon Micro gives you industry-leading response times plus all the assistance you require with how to best consume Microsoft’s cloud services. Our team has a wealth of experience in working not only with the cloud, but most importantly, in working with on-premises systems that are so often interfaced with. We make it easy to contact us via phone, email, and have options that include both free and bespoke Op-Ex models.

PROFESSIONAL SERVICES

Our world-class services organization can help you make the transition from an on-premises or hosted platform to one of Microsoft’s cloud services. We offer consultative services from Workshop and Roadmap to re-platforming, project management and white-glove execution of delivery services.
